

Austrian Avant-garde Metal pioneers KorovaKill (Korova) re-release their debut “A Kiss in the Charnel Fields”. Originally published in 1995, this album soon became a classic of the early days of avant-garde metal. For a couple of years “A Kiss in the Charnel Fields” has been out of stock. Now it’s available again as digital download through the common shops like iTunes, Amazon or Rhapsody.

The digital edition contains the original version of “A Kiss in the Charnel Fields” as well as a remixed and remastered version and the bonus track “Trip to the breeding Planets” (total playing time: 90 minutes). In addition, a reissue of the vinyl-version is announced for May 2011, limited to 300 copies. Definitely a must for all friends of weird and experimental metal!
